

Light Tower Procedure and Etiquette

1. Please turn on your lights about 10 minutes before it gets dark as they need time to warm up.
2. If you as the coach or assistant coach are not the ones to start and stop the lights please ensure the person doing so knows and follows the correct procedures.
3. Please follow the starting and shut down instructions below to alleviate any **damage to the breakers, bulbs or towers themselves.**
4. When finishing your practice, please look around to see who in the area and is also practicing. Ask if they need the extra lighting. If they do you can leave your lights on. **Generally if there are no teams on the connecting fields please shut the lights down so existing teams practicing away from you do not have to turn your lights off.**

PLEASE FOLLOW THE STEPS LISTED BELOW IN ORDER TO NOT DAMAGE THE MACHINES OR BULBS

Turning On

1. Ensure all breakers are down and in the off position. (1 large breaker and 4 small breakers for Yellow Allmand towers or 2 sets of connected breakers for the White Terex towers)
2. **Yellow Allmand** towers- Turn the key halfway to engage glow plug, A yellow light will illuminate, hold the key or wait for 5-10 seconds until the yellow light turns off. Then start the tower.

Once running flip large breaker up first then flip smaller breakers up to turn lights on. PLEASE DO NOT TURN ANY BREAKER ON and OFF multiple times! It will damage the machine. Sometimes the lights take a minute to turn on.

White Terex towers- turn the key one click or halfway and hold down the black button below the key for 15 seconds to engage the glow plug. Then turn the key all the way to start the tower. Next flip up both double breakers to turn the lights on. PLEASE DO NOT TURN ANY BREAKER ON and OFF multiple times! It will damage the machine. Sometimes the lights take a minute to turn on.

Turning Off *****VERY IMPORTANT *****

1. Turn off smaller breakers first
2. Then turn off large breaker. For the white towers there are only the two small double breakers to turn off.
3. Turn the key to the left to shut motor down and close lid.

If you have any problems with the lights or a machine is down please look for a Director, there is usually one on the fields, or call Erik Z 609-558-2866

Please do not turn any of the lights back on for at least 20 minutes after they have been turned off. They will not work and there is a chance that the bulbs can blow out!!
